'At NC 7206 5770, situated on the edge of a level terrace, is a roughly circular cairn about 15.0m in overall diameter and 1.5m in height. It is partly heather-covered with the centre being of bare stones. A large irregular slab, 1.5m by 0.6m by 0.2m, lying 1.5m south of the centre and protruding from the cairn at an angle of about 20° N, has possibly formed part of a cist. No other structural details were seen; the centre of the cairn appears relatively undisturbed.

'Surveyed at 1:10 000.'

(OSFI:JB:21.7.1977)
