"See attached photocopies for text." "NC 911 217 Kildonan Burn, Hut Circles + Field System." "NC 916 2 4 Kildonan Church, Hut Circles + Field System."

345. D_0 .—Some 300 yards distant from the burn, and 600 yards from the road, is a hut circle, the interior of which is faced with stones. The interior is circular, with a diameter of about 34', and has been entered from the SE. On the right of the entrance within the interior are the ruins of what appears to have been a circular stone building, with a diameter over all of from 10' to 12'. The stones have fallen inwards, and lie in concentric rings over the interior. The bank or wall of the main enclosure is some 8' in width, except towards the entrance, where it broadens out on both sides, so as to form a passage 20' in length. The walls of the passage, which have been largely built of stone, are still in places some 3' high, and the amount of stone lying in and about shows that originally the height of the At the interior extremity building must have been considerable.

the width of the passage is 3' 4". At 8' outwards are two door cheeks 3' apart. Within them the passage has expanded to 4' 8",

and beyond to the exterior it maintains a width of 3'. the only hut circle in which such provision for a door has been observed (fig. 45).

(NC 914221) Enclosures and Hut Circles (NR)

(1).(2).

Up the west bank of the Kildonah Burn on Creag Druim man Rath, is a large group of hut circles and small mounds. Six enclosures (A-F) are specified, two of which (B and C) are planned. At the south end of the group of hut circles on the top of the bank above the burn and on the SE point of the hill, is a circular depression, 7ft internal diameter, lined with stones and 'filled with ruins'. An entrance seems to have been from the SE.

In addition to those noted by the RCAHM seven more hut (OSFI:WDJ:3.6.1961). circles were found. Associated with the huts are numerous clearance heaps and traces of old field enclosure banks.

#(See HNC 91 NE 025)

Using the Kilphedir excavation as an analogy the sequence
of occupation would appear to be a settlement of 'simple'
huts with field clearance heaps, about 500 BC, followed
about 130 BC by the Kilphedir type V huts, with fields.

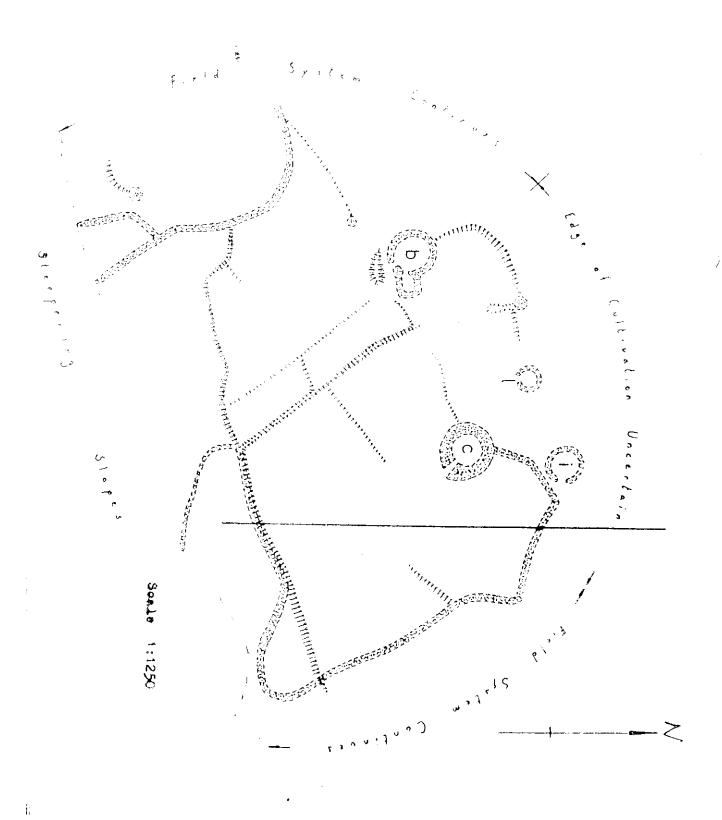

This is a settlement of twelve hut circles (A-L)including a newly recognised hut (L), on the gentle S and E flanks of a hill, in association with a field system. Of the published features at NC 91012213 and NC 91562202, the first is a rectangular footing, about 8.0m by 3.0m, of a bothy-type structure; the other an apparent segment of revetted platform which may be the E half remaining of a hut about 14.0m diameter overall but the presence of stone clearance in what would be the W half makes a field plot more realistic.

The majority of the huts are circular varying from 6.0m to 10.5m inside diameters; two huts, 'B' and 'K', are oval being 12.5 by 11.5 and 12.0 by 9.0m respectively, internally, the longer dimension in both cases on a NW-SE axis. Walls, in the main heather covered, are spread from 1.5-3.0m broad, roughly in ratio to hut sizes and stand at best, in huts 'B' and 'D' to 0.9m. Entrances are from the E or SE arcs and in huts 'C' and 'E' are clubbed; the

latter hut would seem of the Kilphedir Hut V type rather than hut 'K' noted by the PSAS. Hut 'C', the best defined preserves a fairly extant inner wall facing of contiguous boulder slabs on edge; its entrance passage, stonecoarsing lined, is 6.0m in the E and 4.5m long in the opposing side , the latter somewhat obscured by debris; there are door jambs 2.5m out from the inside. In hut 'B' a break, 3.0m east of the entrance, in the wall opens into an outside sunk chamber rectangular in form, 6.0m ENE-WSW by 3.0m internally and standing, inside, to 1.0m high: About 1.5-2.0m outside the same hut concentric to the wall arc approaching the W side of the entrance, is an elongate mound 11.0m long, tapering from the N to the greatest dimension at the S where it is 6.0m wide and 1.0m high; a windbreak is suggested.

The field system is well illustrated by mounds of stone clearance, wasted banks and occasional lynchets. Cultivation plots, averaging 20.0 by 15.0m are discernible.

At NC 915220 are three or four circular depressions fille with stones, one of which is presumably that noted by the RCAHM. They appear to be natural sink-holes in the peat into which field stones have been dumped. (OSFI:JM:9.12.1976).

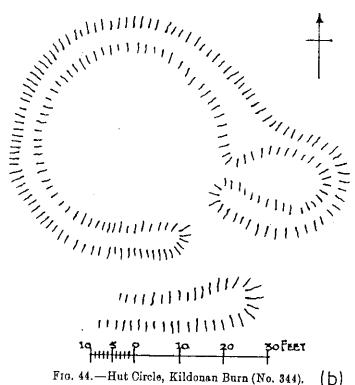

344. Kildonan.—On Creag Druim nan Rath, about the 500 elevation above sea-level, some 400 to 500 yards WNW. of the Kildonan Burn, and about the same distance N. of the road up the strath, is a group of small mounds, and at the W. end of them faint indications of a number of round turf enclosures.

Up the W. bank of the Kildonan Burn, at a level of about 100' to 150' above the stream, and running up the glen for about \(\frac{3}{4}\) m. from the road, is a large group of hut circles and small mounds. The hut circles are mostly of circular form, largely built of stone, and the remains of walls which run among them, as if demarcating holdings, are very numerous. The groups of mounds as well as the hut circles appear to be within these enclosures.

Some 400 yards from the W. bank of the burn, and 500 yards above the road, is a circular enclosure, with an interior diameter of 26'. The thickness of the bank is indefinite. Along the inner face large stones are set at intervals. The entrance is from the SE.

Some 40 yards SE of the last is an oval enclosure, with interior dimensions of 38' × 41'. It is entered from the SE, but the width of the entrance is not apparent. The bank is 7' in width, is overgrown with heather, and seems to be composed of turf and stone. At about 6' along the inner face of the bank, to the right of the entrance, is a passage through it, some 6' in length, but of indefinite width, giving access to a sunk chamber, the roof of which has entirely disappeared. The chamber is oval in form, and measures some 20' in length by

11' in width. The present floor level is about 4' lower than that of the hut circle, and 2' to 3' below that of the surrounding ground, which slopes in its direction. The sides have been built. From the lower end of this chamber on the outside an old wall passes down the hill. Some 15' distant from the entrance to the hut circle, and partially covering it, a bank about 17' wide runs in a westerly direction for a distance of about 33'. A number of small mounds lie around (fig. 44).
