(1)

Traces of a circular building about 13 yds in diameter lie near the farm of Beolary (now Scallascaig - NG 8420), on the top of a high alluvial bank through which the river has cut its way. (1)

Half of the structure seems to have fallen into the river due to the erosion of the bank and only a few stones remain on top. Large stones lie in the stream below.

(A Fs indicate that NG 8467 2012 is the most likely site.)

NG 8467 2012: Generally as described by Bogle. At the site are a few large earthfast stones - too few to give any indication of size of structure or what it was. The site is quite a logical one for a small dun and the bank or ridge on which it lies is known locally as "Cnoc a' Chaisteil". (a) (A. MacKenzie, Allt-mhor, Glenelg)

(OSFI:WDJ:6.10.1966)

The remains of a cairn, not a dun, on the point of a glacial spur. All that survives is the Ward, consisting of a grassy mound 0.5m high with one or two boulders of a kerb, mostly displaced, suggesting an original diameter of 12.5m.

(OSFI:AA:19.6.1974)

188 PROCEEDINGS OF THE SOCIETY, FEBRUARY 11, 1895.

#### KINTAIL

Near the farm of Beolary is a high alluvial bank, through which the river has cut its way. On the top of the bank are faint traces of some circular building, the half of which seems to have fallen into the river through the wearing away of the bank. In the bed of the stream, immediately below, can be seen large stones. From the few stones to be seen on the top, I found the outer measurement was 13 yards in diameter
