\* 'Hut circle (A) outwith Scheduled Area' (HRA: RBG 115.1990).

Centred at NH 707 821 on a generally W-facing slope, is a settlement of seven stone-walled huts (A - G) and a contemporary field system.

Hut 'A', set into a WNW-facing slope, is visible as an oval platform measuring c13.0m NNE-SSW by c10.5m bounded by traces of walling. The entrance is not apparent. (*Outside Scheduled Area*).

'B' is oval measuring c15.5m NE-SW by c13.0m between the centres of a wall spread to c3.0m all round, in which a few outer wall facing stones are visible. The 'simple' entrance in the NE is c1.0m wide.

'C', set into the slope, is visible as a circular platform, measuring c9.5m in diameter, bounded by traces of walling in all arcs but the E. The entrance is not evident.

'D', set into the slope, is circular measuring c6.5m in diameter between the centres of a wall spread to c2.0m all round. The entrance cannot be seen.

'E' is circular with outer wall facing stones visible intermittently round most of the circumference giving an overall diameter of 9.0m. The wall is spread to c2.5m all round. The S arc is mutilated. The entrance is in the NE and on the N side the wall extends eastwards for c2.0m, probably forming a windbreak.

'F', set into the slope, is circular measuring c10.5m in diameter between the centres of a wall spread to c3.5m all round. The entrance in the SW is mutilated.

'G', set into the slope, is oval measuring c16.0m N-S by c14.0m between the centres of a wall spread to c3.5m all round. The SW arc is mutilated by a drain. The entrance in the S is mutilated.

The field system is marked by stone clearance heaps, noted as 'mounds' by Ashford (a), lynchets and a few walls. It is best preserved to the NW of hut 'E', where a typical plot measures about 40m by 20m.

Field system delineated on 6" sheet.

Surveyed at 1/2500 on AM & CR paper copy.
